Freshroots Demand Planning · Components Map

Data and Zoho in → rules engine → a named human approves → draft PO in Zoho → a person issues it

Actor	Trigger	Input	Rules	Human	Guard & memory	Output
Planner (Raghav / Deepa)	**1 Opens the app** — Dashboard on any device; run_weekly.sh gives a weekly CSV report					
Data files (CSV exports)	reads → **2 Reads the data files** — sales, SKU master, stock, calendar, festivals (CSV)					
Zoho Inventory (real account, India)		data → **3 Reads Zoho** — stock + open POs, read-only, kept 45 s; falls back to the CSVs				**9 Creates a draft PO** — in Zoho as DRAFT only; the app never issues one
Rules engine (engine.py)			stock + POs → **4 Applies the rules** — 4-vs-12-week, cover, perishable window, festival uplift by category or SKU; odd cases go to review			
Dashboard (control tower)			flags → **5 Shows every flag** — reasons, burn-down, what-if, festival plan, mid-week signals, distributor map		approved qty	
Approver (a named person)			review → **6 Approves or overrides** — a named person; reason tag; can become a 30-day rule			draft
Approval gate (server check)				decision → **7 Checks the approval** — no PO without a named approval of that SKU and quantity		
Neon database (Memory)				logs → **8 Saves everything** — decisions, approvers, rules, uplifts, PO audit log		
Procurement (a person)						**10 Issues the PO** — a person reviews the draft and issues it in Zoho
Executive view (Reports)						issued → **11 Reports** — 12 metrics, summary, CEO report download, PO log

Data comes in · The app enforces the rules · Services store and read · People decide and act · No PO without a named human

Stack: plain HTML and JavaScript · Python functions on Vercel · Neon Postgres · Zoho Inventory API · GitHub

Not connected: WhatsApp sending (the CS queue is sample data), a live SAP feed. The app never issues a PO; a person does.
